

# COMPLIANCE STATEMENT POLYPROPYLENE BF970MO

## DECLARATION OF COMPLIANCE TO FOOD CONTACT REGULATIONS - BF970MO

We confirm that this product fulfils the applicable requirements on substances used for the manufacturing of materials and articles or components of articles intended to come into contact with food as described in the below cited legislation and standards.

### EU

The below listed regulations represent harmonised EU legislation are directly applicable in all EU-member states. National legislation implementing such regulations is therefore not separately cited in this document.

We would like to stress that this product is a **Plastic Intermediate Material**. Therefore, this confirmation is restricted to the requirements as applicable for **Plastic Intermediate Material** used for the manufacturing of materials and articles or components of articles intended to come into contact with food.

- Commission Regulation (EC) No. 1935/2004 – The organoleptic characteristics of food contact materials are influenced by converting conditions, time and temperature of storage and type of food, therefore compliance with article 3, §1, c must be verified and tested by the producer of the final packaging material.
- Commission Regulation (EU) No. 10/2011 as amended up to Commission Regulation (EU) No. 2024/3190\*. All used monomers and additives are listed in Annex I of this regulation. For any applicable restrictions as set by the Annexes I and/or II see chapter “migration testing.”
- Commission Regulation (EC) No. 2023/2006. This material has been manufactured in accordance with the relevant requirements of good manufacturing practice for materials articles intended to come into contact with food, as described in more detail in the “Borouge Position on Food Hygiene Demands and Standards” on Borouge’s homepage.
- Commission Regulation (EC) No. 1895/2005 – BADGE, NOGE and BFDGE are not used for the production of this grade.
- Commission regulation (EC) No. 450/2009 on active and intelligent materials and articles is not applicable to Borouge’s polymer resins.

\*We are currently reviewing with our raw materials suppliers on the compliance status of the latest amendment (Commission Regulation (EU) No. 2025/351). We will provide confirmation on the compliance status before 16 December 2025.

### ADDITIONAL NATIONAL LEGISLATION IN EU-MEMBER STATES (AS AMENDED TO DATE)

Polymerisation production aids, aids to polymerisation, colorants and solvents, if not already listed in Annex I of Regulation (EU) No. 10/2011 can be based on their national approval and are subject to mutual recognition. The process chemicals used for the manufacturing of this grade are permitted by at least one of the following regulations/recommendations or are to be deemed safe based on a risk assessment conducted in accordance with Article 19 of Regulation (EU) No. 10/2011.

<b>France</b>	Décret No. 2007-766 du 10 mai 2007 portant application du code de la consommation en ce qui concerne les matériaux et les objets destinés à entrer en contact avec les denrées alimentaires, as amended and the French DGCCRF guidelines on food contact plastics
<b>Germany</b>	BfR-Empfehlung VII Polypropylen, Stand 01.06.2019

**The Netherlands** Verpakkingen- en Gebruiksartikelenbesluit, 2014 (Warenwet), Deel A, Hoofdstuk 1, Kunststoffen, as amended (last update from 01.07.2022)

## EUROPE (NON-EU-COUNTRIES)

**Norway** Sosial-og helsedepartementets forskrift 1993-12-21-1381 as amended (referring to Regulation (EU) No. 10/2011)

**Switzerland** Verordnung der EDI über Bedarfsgegenstände vom 16.12.2016 (817.023.21); Stand am 1. Januar 2025, 5. Abschnitt: Bedarfsgegenstände aus Kunststoff

**Türkiye** Notification No. 2019/44 from 25.12.2019 - referring to Regulation (EU) No. 10/2011

**United Kingdom** The Materials and Articles in Contact with Food  
SI 2019 No. 704 - (England) (Amendment) (EU Exit) Regulations 2019  
SI 2018 No. 186 - (Northern Ireland) (Amendment) Regulations 2018  
SI 2019 No. 32 - (Scotland) (Amendment) Regulations 2019  
SI 2018 No. 913 - (Wales) (Amendment) Regulations 2018  
(referring to EU legislation)

## WORLD

**Brazil** ANVISA RDC nº 56 /2012 - Lista positiva de monômeros (Brazilian implementation of RES 02/12 and amendments)  
ANVISA RDC nº 326/2019 - Lista positiva de aditivos (Brazilian implementation of RES 39/19 and amendments)

**China** GB 9685-2016 - National standard on the use of additives in food contact materials and articles as amended  
GB 4806.1-2016 - National standard on general safety requirements for materials and articles in food contact - so far applicable to polymer resins.  
GB 4806.7-2023 - National Food Safety Standard on Food Contact Plastic Materials and Articles:  
Appendix A Table A.1 – 63: Poly[(1-propene)-co-ethene], CAS# 9010-79-1  
GB 31603-2015 General Hygienic Standard for Production of Food Contact Materials and Articles - This material has been manufactured in accordance with the relevant requirements of good manufacturing practice for materials articles intended to come into contact with food, as described in more detail in the “Borouge Position on Food Hygiene Demands and Standards” on Borouge’s homepage.

**India** IS 16738 : 2018 Positive list of constituents for polypropylene polyethylene and their copolymers for its safe use in contact with foodstuffs and pharmaceuticals  
3.1 & 3.2 of IS 10910 : 1984 Specification for polypropylene and its copolymers for its safe use in contact with foodstuffs pharmaceuticals and drinking water

**Indonesia** Badan Pengawas Obat dan Makanan (BPOM) Regulation 20/2019 on Food Packaging.

**Japan** Specifications and Standards for Foods, Food Additives, Etc. (Notification No. 370 of 1959 by Japan Ministry of Health, Labour and Welfare (MHLW)) as amended (Latest amendment is Notification No. 324 of 2023 as promulgated on November 30, 2023 by MHLW and amended by Cabinet Office Notification No. 128 on September 27, 2024  
Appended Table 1, Table 1 (Base materials)  
Polymer group 2: Polymer composed of alkenes as the main monomer;  
Appended Table 1, Table 2 (Additives)  
All used additives are listed and below the permitted concentration limits

**Mercosur** MERCOSUR/GMC/RES. Nº 03/92 & MERCOSUR/GMC/RES. Nº 56/92 as amended by GMC/RES. Nº 20/21 - so far applicable to polymer resins  
MERCOSUR/GMC/RES. Nº 02/12 as amended by GMC/RES. Nº 19/21 and Nº 28/24 - Lista positiva de monomeros

**MIDDLE EAST:  
GCC countries**

MERCOSUR/GMC/RES. N° 39/19 as amended by GMC/RES. N° 22/24 - Lista positiva de aditivos

All used monomers, starting substances and additives are listed as authorised for materials in Table 1 of Gulf Technical Regulation GSO 1863:2021 Food Packages - Part 2: Plastic Package – General Requirements

Gulf Technical Regulation GSO 2231:2012 General requirements for materials intended to come into contact with food

Gulf Technical Regulation GSO 839:2021 Food packages – Part 1: General requirements and Gulf Technical Regulation GSO 1863:2021 Food packages – Part 2 Plastic package – General Requirements cover those materials and articles that, in their finished state, are intended or reasonably expected to contact food, or to transfer their constituents to food under normal or foreseeable conditions of use.

This product is a **Plastic Intermediate Material**, in pellets, to be converted into final articles. We don't manufacture final articles. It is the responsibility of the converter or food packer to verify that the final articles made out of Borouge products comply with all the applicable regulations and requirements.

**USA**

FDA, CFR, Title 21,

177.1520 (a)(3)(i)(c)(1), (b) and (c)3.2a Olefin polymers

**Limits of use  
(FDA)**

Test samples made from this product fulfilled the extraction requirements according to FDA CFR 21 §177.1520(c), as defined for the type of polymer described above. Therefore, this product may be used in contact with all food types as described in table 1 of CFR 21 §176.170(c), under conditions of use A through H as described in table 2 of CFR 21 §176.170(c) (including articles used for packing or holding food during cooking). **It is the responsibility of the converter or food packer to control that the final packaging complies with the requirements of the intended and foreseeable conditions of use.**

**MIGRATION LIMITS AND TESTING****Migration limits**

This product contains traces of Aluminium, which is regulated with a specific migration limit in EU (Commission Regulation (EU) No. 10/2011; Article 6.3.a and Annex II), Mercosur (Res. 39/2019 Anexo 4.3.b and Res. 02/2012 chapter 4b) and Switzerland (Bedarfsgegenständeverordnung 817.023.21, Anhang 2.3.1); (1 mg/kg expressed as Al). Representative worst case tests (3% acetic acid; 4h/100°C) did not show any migration above 0.04 mg/kg.

Other used monomers and additives used for the manufacturing of this product are not regulated with specific migration limits.

Substances also authorised as direct food additives ("Dual use additives") are either not used for the manufacturing of this product, kind of not migrating, or only present in quantities that in case of their migration don't allow relevant contribution to exceed of the limits as set in the applicable food legislation.

**Migration testing**

In accordance with article 12 of Commission Regulation (EU) No. 10/2011, article 12 of Swiss ordinance 817.023.21 and article 2.12 of Chinese standard GB4806.1 the overall migration shall not exceed 10 mg/dm<sup>2</sup> from plastic materials and articles, with the exception for plastic materials and articles intended to contact infant or child food (60mg/kg). (MERCOSUR/GMC/RES N° 20/21 amending MERCOSUR/GMC/RES N° 56/92 - 8 mg/dm<sup>2</sup> and 50 mg/kg food).

In accordance with requirement 3.4 of Indian Standard IS 10910 : 1984, the overall migration shall not exceed 60 mg/kg from plastic materials and articles, with the exception for plastic materials and articles described in 3.4 a)i) and ii) (10 mg/dm<sup>2</sup>).

A representative sample from this or a comparable material, tested for 2d at 20°C in isooctane (1 mm plate / total immersion) did not exceed the limit of 10 mg/dm<sup>2</sup> for overall migration. **This test result is only valid for orientation purposes but must not be used to confirm legal compliance of the finished article.**

**Compliance with the overall and specific migration limits as described above must be measured from the final packaging intended to come into contact with foodstuff by using real food or appropriate food simulants at the intended and foreseeable conditions of use as specified in Annex III of Commission Regulation (EU) No. 10/2011; Annex 4 of Swiss Ordinance 817.023.21; Chinese standard GB31604.8-2021; Mercosur GMC Res No. 32/2010 and Indian Standard IS 9845 : 1998. It is the responsibility of the converter or food packer to verify that the final packaging complies with the overall and specific migration limits as set out by the applicable legislation.**

### NON-INTENTIONALLY ADDED SUBSTANCES - NIAS

Commission Regulation (EU) No. 10/2011 notes that not all contaminants and reaction products of authorised monomers and additives can be listed in its Annex I. The identification of non-listed migrants may therefore not be an exclusion criterion in itself. However, a toxicological evaluation of these migrants needs to be performed.

The major fractions of NIAS in Polyolefins are the oligomers, which are unavoidably formed during polymerisation and cannot be removed. A recent joint study of polyolefin producers demonstrated that oligomers migrating from all types of polyolefins only consist of linear and branched alkanes (POSH) and alkenes (POMH), no cyclic or aromatic compounds were found. The toxicological assessment of such migrants concluded that they are sufficiently characterised by the existing overall migration limit.

Further a variety of representative Borouge products, covering the whole Borouge product spectrum, was assessed in relation to migrating NIAS by renowned test institutes. Beside oligomers the typical NIAS are reaction- and decomposition products from antioxidants, many of them known as "Arvin-substances". Another joint industry study confirmed that none of these Arvin-substances are genotoxic and can therefore be rated at least as "Cramer-class III", allowing a daily consumption of 90 µg/person/day.

However, we wish to stress that a NIAS-assessment is subject to the finished food contact article and the formation of NIAS is influenced by thermal and mechanical treatment during conversion, mixture with other substances and the applied test conditions. A raw material screening therefore can never monitor all potential criteria.

Annex IV of Commission Regulation (EU) No. 10/2011 (Declaration of Compliance), as revised by Commission Regulation (EU) No. 2020/1245, requires to inform the downstream user about substances in the intermediate material, *for which genotoxicity has not been ruled out, and which originate from an intentional use during a manufacturing stage of that intermediate material and which could be present in an amount that foreseeably gives rise to a migration from the final material exceeding 0.00015 mg/kg food or food simulant.* **To our present day knowledge, this product does not contain any intentionally added or known non-intentionally added substances for which genotoxicity has not been ruled out.**
